

MANAGED CLOUD NATIVE PLATFORM

Concentrate on the core business and let experts take care of the operation of the cloud native platform.

Problem

Organisations face the challenge of migrating their applications and services to the cloud while ensuring that this cloud-native environment runs efficiently and smoothly. This requires extensive resources, expertise and time to configure and manage the required infrastructure, which many organisations find cumbersome.

Key features

- 24/7 monitoring and support – round-the-clock support from cloud experts.
- Automated scaling – the platform automatically adapts to resource requirements.
- Security management – protection against threats and regular updating of security policies.
- Continuous optimisation – ongoing improvements and adjustments to increase performance and efficiency.

Solution

Our Managed Cloud Native Platform offering provides a fully managed cloud-native platform that enables organisations to move their applications to the cloud without having to worry about the complexities of infrastructure management.

Benefits

- Cost efficiency – reduced operating costs by utilising subject matter experts to manage the cloud-native platform.
- Rapid deployment – accelerated implementation of applications in the cloud, reducing time to market.
- Scalability – the platform enables easy scaling of resources to respond to changes in demand.
- Security and compliance – maximum security and adherence to compliance standards thanks to professional monitoring and updating.
