

CLOUD NATIVE HEALTH CHECK

Check existing cloud native environments and explore optimization potential – for any cloud with any Kubernetes!

Problem

Kubernetes can be complex and you're unsure if your infrastructure is optimally deployed and configured and have concerns about reliability and wonder whether there is potential to tune your Kubernetes in terms of efficiency and costs.

Key Features

- Capture environments using automated, AI-powered monitoring tools.
- Detailed report with recommendations for action.
- Express (1 day) or Extended (up to 1 week).
- One-time or recurring assessments available as needed to ensure optimal performance.

Solution

cloud37's Cloud Native Health Check, will give you a clear report that shows you where there is still potential for optimization in terms of security, efficiency, reliability, and costs.

Benefits

- Identify potential cost optimizations in the public cloud.
- Increased efficiency in the provisioning of clusters, containers, and applications.
- Increase reliability of your platforms.
- Elimination of possible security risks.

"Let's schedule a [meeting](#) to discuss and set up an Assessment!"
