

CLOUD NATIVE READINESS CHECK

Determine the current state of your organization for an optimal start to your individual cloud native journey.

Problem

You are unsure whether your organization, infrastructure or platform is ready for containerization and cloud native. You lack a detailed current state analysis, and you don't know what the optimal next steps should be or what should be prioritized.

Key Features

- Joint assessment of the current state based on 10 dimensions relating to organization and technology.
- Report with recommendations for action.
- Minimum 4 man-days (2 days on-site).
- Optional:
 - Scanning tools (where applicable)

Solution

Using the Cloud Native Maturity Matrix and (optionally where necessary) scanning tools, we record your individual current state for you. Based on the results, we create a detailed report for you with recommendations for action, from which you can derive exactly where you stand and how best to proceed.

Benefits

- Clarity regarding the current state of your organization, platforms, and infrastructure.
- You understand what is still missing and what is still needed to move towards cloud native.
- You can see which topics should be addressed as a priority.
- The next steps are clear, and you can start planning your journey.
