CLOUD NATIVE SECURITY CHECK

Security audit of your platforms, software supply chains or applications based on industry standards.

Problem

Ensuring the security of an application or platform is often not easy. You want to be sure that your platform really complies with common practice and that you have properly covered the relevant aspects in terms of security.

Solution

With our Cloud Native Security Check, we check your platform, your software supply chain, or your application(s) for the most common technical security precautions. You receive a detailed report that enables you to close any gaps found as quickly as possible.

Key Features

- Based on industry standards (SLSA, OWASP, CIS Docker Benchmark or NIST Application Container Security Guide)
- Report with recommendations for actions.
- Characteristics:
    - Security review of existing platforms
    - Security check of the software supply chain
    - Application security check

Benefits

- Platform, software supply chain or application verified based on industry standards.
- Clear recommendations for action to ensure the necessary security.
